

Healthcare & Medical

With its strong backbone in making high precision metal and plastic parts, KeyTec combines this with a range of assembly techniques to make specific subassemblies up to complete customer specific end products.

A variety of products is being produced under strict regulated procedures. Component manufacturing, assembly and packaging of these parts is done under the same roof. The **ISO 13485 certificate** ensures to work with standard procedures and full traceability that are vital in this market. Traceability is maintained both by our broad range of in house manufacturing options and management of subcontractors.

Also where it comes to the integration of the customer's electronics into the devices, the assembly can be supported as well, from a single step assembly to the complete assembly and ready for end-customer product.
