

Mechatronic Components

KeyTec Netherlands has several technologies to produce high precision parts and subassemblies for the connector and electronics industry. The one roof concept, wide range of technologies, enables to produce very high volumes of plastic and metal components as well as combinations and assemblies.

From its Philips origin, mechatronic components is the field they are familiar with, producing a variety of electronics supporting and connecting components like terminals, lead frames, power distributing busbars, connector-pins, HV-charging, shields & bezels.

Customers are also thinking of KeyTec when it comes to integrating their own electronics into devices, assembly is supported, from one-step assembly to sub-assemblies ready for use at the OEM.
